Langkah Kerja

1. Instalasi dan Konfigurasi

-Instalasi Echo Framework

```
khairul@ASUS:~/nginx_configuration$ go install github.com/labstack/echo/v4@latest
go: downloading github.com/labstack/echo/v4 v4.13.3
go: downloading github.com/labstack/echo v3.3.10+incompatible
go: downloading github.com/labstack/gommon v0.4.2
go: downloading golang.org/x/crypto v0.31.0
go: downloading golang.org/x/net v0.33.0
go: downloading github.com/mattn/go-colorable v0.1.13
go: downloading github.com/mattn/go-isatty v0.0.20
go: downloading github.com/valyala/fasttemplate v1.2.2
go: downloading golang.org/x/text v0.21.0
go: downloading golang.org/x/sys v0.28.0
go: downloading github.com/valyala/bytebufferpool v1.0.0
package github.com/labstack/echo/v4 is not a main package
```

- Lalu lakukan git clone untuk menjalankan kode dari repository github ke local

```
khairul@ASUS: ~/nginx_conf ...
Setting up libheif-plugin-libde265:amd64 (1.17.6-1ubuntu4.1) ...
Setting up libheif-plugin-aomenc:amd64 (1.17.6-1ubuntu4.1) ...
Processing triggers for libc-bin (2.39-0ubuntu8.4) ...
Processing triggers for man-db (2.12.0-4build2) ...
khairul@ASUS:~$ echo 'export GOPATH=$HOME/go' >> ~/.profile
echo 'export PATH=$PATH:$GOPATH/bin' >> ~/.profile
source ~/.profile
khairul@ASUS:~$ git clone https://github.com/kusnadi8605/nginx_configuration
cd nginx_configuration
Cloning into 'nginx_configuration'...
remote: Enumerating objects: 32, done.

Resolving deltas: 100% (8/8), done.
khairul@ASUS:~/nginx_configuration$ go get -u github.com/labstack/echo/v4
go: go.mod file not found in current directory or any parent directory.
'go get' is no longer supported outside a module.
To build and install a command, use 'go install' with a version,
like 'go install example.com/cmd@latest'
For more information, see https://golang.org/doc/go-get-install-deprecation
or run 'go help get' or 'go help install'.
khairul@ASUS:~/nginx_configuration$ go get -u github.com/labstack/echo/v4
go: go.mod file not found in current directory or any parent directory.
'go get' is no longer supported outside a module.
To build and install a command, use 'go install' with a version,
like 'go install example.com/cmd@latest'
For more information, see https://golang.org/doc/go-get-install-deprecation
or run 'go help get' or 'go help install'.
```

- Selanjutnya melakukan inialisasi untuk modul golang

```
khairul@ASUS:~/nginx_configuration$ go mod init nginx_configuration
go mod tidy
go mod vendor
go: creating new go.mod: module nginx_configuration
go: to add module requirements and sums:
    go mod tidy
go: finding module for package github.com/labstack/echo/v4
go: found github.com/labstack/echo/v4 in github.com/labstack/echo/v4 v4.13.3
go: downloading github.com/stretchr/testify v1.10.0
go: downloading gopkg.in/yaml.v3 v3.0.1
go: downloading github.com/davecgh/go-spew v1.1.1
go: downloading github.com/pmezard/go-difflib v1.0.0
khairul@ASUS:~/nginx_configuration$ PORT=8081 go run main.go
```

2. Jalankan Aplikasi Golang

- Setelah melakukan instalasi dan konfigurasi sekarang file main.go sudah siap dijalankan pada tiga port sekaligus.

- Port: 8081

- Port: 8082

- Port: 8083

The image displays four terminal windows showing the execution of a Go application. The first window shows the initial setup and running on port 8081. The second window shows running on port 8082. The third window shows running on port 8083. The fourth window shows a fatal error when attempting to run on port 8083 again, indicating it is already in use.

```
khairul@ASUS:~/nginx_conf...
go mod tidy
go: finding module for package github.com/labstack/echo/v4
go: found github.com/labstack/echo/v4 in github.com/labstack/echo/v4 v4.13.3
go: downloading github.com/stretchr/testify v1.10.0
go: downloading gopkg.in/yaml.v3 v3.0.1
go: downloading github.com/davecgh/go-spew v1.1.1
go: downloading github.com/pmezard/go-difflib v1.0.0
khairul@ASUS:~/nginx_configuration$ PORT=8081 go run main.go

v4.13.3
High performance, minimalist Go web framework
https://echo.labstack.com

-----o/-----
|
=> http server started on [::]:8081

khairul@ASUS:~/nginx_conf...
khairul@ASUS:~$ cd nginx_configuration
khairul@ASUS:~/nginx_configuration$ PORT=8082 go run main.go

v4.13.3
High performance, minimalist Go web framework
https://echo.labstack.com

-----o/-----
|
=> http server started on [::]:8082

khairul@ASUS:~/nginx_conf...
khairul@ASUS:~$ PORT=8083 go run main.go
stat main.go: no such file or directory
khairul@ASUS:~$ cd nginx_configuration

ready in use"}
exit status 1
khairul@ASUS:~/nginx_configuration$
```

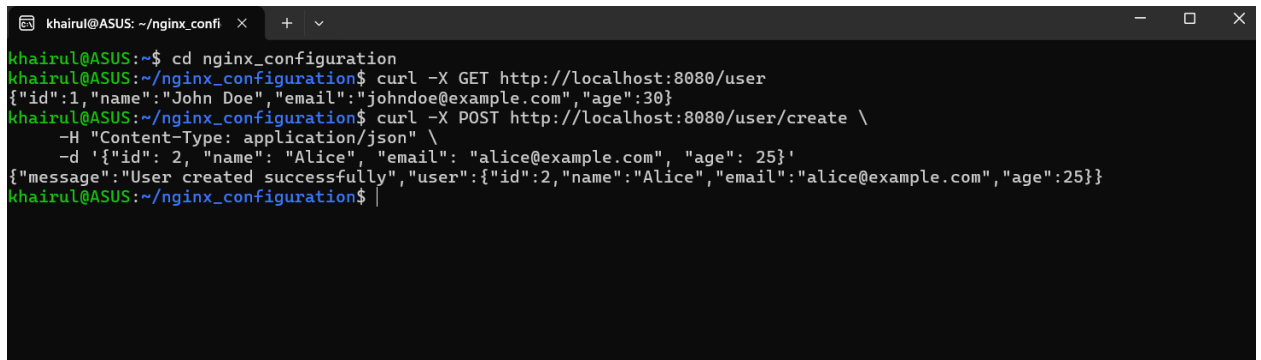

- Semua port berhasil dijalankan dengan sukses.

3. Pengujian API

- Mengirim request 10 kali dengan curl

```
khairul@ASUS:~/nginx_configuration$ for i in {1..10}; do curl -X GET http://localhost:8080/user; done
{"id":1,"name":"John Doe","email":"johndoe@example.com","age":30}
{"id":1,"name":"John Doe","email":"johndoe@example.com","age":30}
{"id":1,"name":"John Doe","email":"johndoe@example.com","age":30}
{"id":1,"name":"John Doe","email":"johndoe@example.com","age":30}
{"id":1,"name":"John Doe","email":"johndoe@example.com","age":30}
{"id":1,"name":"John Doe","email":"johndoe@example.com","age":30}
{"id":1,"name":"John Doe","email":"johndoe@example.com","age":30}
{"id":1,"name":"John Doe","email":"johndoe@example.com","age":30}
{"id":1,"name":"John Doe","email":"johndoe@example.com","age":30}
{"id":1,"name":"John Doe","email":"johndoe@example.com","age":30}
khairul@ASUS:~/nginx_configuration$ for i in {1..10}; do
  curl -X POST http://localhost:8080/user/create \
    -H "Content-Type: application/json" \
    -d '{"id": $i, "name": "Alice$i", "email": "alice$i@example.com", "age": 25}'
done
{"message":"User created successfully","user":{"id":1,"name":"Alice1","email":"alice1@example.com","age":25}}
{"message":"User created successfully","user":{"id":2,"name":"Alice2","email":"alice2@example.com","age":25}}
{"message":"User created successfully","user":{"id":3,"name":"Alice3","email":"alice3@example.com","age":25}}
{"message":"User created successfully","user":{"id":4,"name":"Alice4","email":"alice4@example.com","age":25}}
{"message":"User created successfully","user":{"id":5,"name":"Alice5","email":"alice5@example.com","age":25}}
{"message":"User created successfully","user":{"id":6,"name":"Alice6","email":"alice6@example.com","age":25}}
{"message":"User created successfully","user":{"id":7,"name":"Alice7","email":"alice7@example.com","age":25}}
{"message":"User created successfully","user":{"id":8,"name":"Alice8","email":"alice8@example.com","age":25}}
{"message":"User created successfully","user":{"id":9,"name":"Alice9","email":"alice9@example.com","age":25}}
{"message":"User created successfully","user":{"id":10,"name":"Alice10","email":"alice10@example.com","age":25}}
khairul@ASUS:~/nginx_configuration$
```

-Testing API GET dan POST menggunakan Curl

```
khairul@ASUS: ~/nginx_conf | x
+ v
khairul@ASUS:~$ cd nginx_configuration
khairul@ASUS:~/nginx_configuration$ curl -X GET http://localhost:8080/user
{"id":1,"name":"John Doe","email":"johndoe@example.com","age":30}
khairul@ASUS:~/nginx_configuration$ curl -X POST http://localhost:8080/user/create \
  -H "Content-Type: application/json" \
  -d '{"id": 2, "name": "Alice", "email": "alice@example.com", "age": 25}'
{"message":"User created successfully","user":{"id":2,"name":"Alice","email":"alice@example.com","age":25}}
khairul@ASUS:~/nginx_configuration$
```
